KAVINSAN SASIKUMAR

Malabe, Colombo, Sri Lanka | +94 77 2315614 | kavinsansasi@gmail.com | linkedin.com/in/kavinsan-sasikumar | github.com/kavinsansasi-dot

PROFESSIONAL SUMMARY

Passionate and detail-oriented undergraduate student at the Sri Lanka Institute of Information Technology (SLIIT), currently pursuing a BSc (Hons) in Information Technology, and a full-stack developer specializing in the MERN stack and RESTful API design. Has built multi-role web platforms (customer, owner, admin) with JWT authentication and role-based access control, Stripe payment integration, real-time features with Socket.io, and cloud image storage and email notifications. Also builds mobile apps with Flutter and native Kotlin. Works with Git, with a focus on clean, maintainable code and secure handling of user and payment data.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Dart, Kotlin
Frontend: React.js (Vite), React Router, Context API, React Query, React Hook Form, Tailwind CSS, HTML, CSS
Backend: Node.js, Express.js, RESTful APIs, Socket.io (real-time updates), Multer (file upload)
Databases: MongoDB, Mongoose
Authentication & Security: JWT, bcrypt, role-based access control, CORS configuration, request validation
Integrations & Services: Stripe (Payment Intents), Cloudinary, Nodemailer, PDF invoice generation (pdf, printing)
Mobile: Flutter, Riverpod, go_router, Android (Kotlin), Material Design, RecyclerView, SharedPreferences, Gson
Tools: Git, GitHub, npm, Vite
Also familiar with: Java, Python, PHP, C, C++, Spring Boot, Next.js, React Native, MySQL, PostgreSQL, SQL Server, Docker, Kubernetes, microservices, design patterns (Strategy, Factory), SOLID, YOLOv8, OpenCV

PROJECTS

Hotel Booking Platform

React, Node.js, Express.js, MongoDB, Stripe, Cloudinary, Nodemailer, JWT | github.com/kavinsansasi-dot/Hotel-Booking-Platform

Hotel booking platform where customers search, book and pay online, and owners and admins manage hotels, rooms and reviews.

- Built a full-stack hotel booking platform with three user roles (customer, hotel owner, admin), using JWT authentication, bcrypt password hashing and role-based route authorization.
- Integrated Stripe Payment Intents with server-side payment verification, so a booking is confirmed only after the payment succeeds, with no card data stored in the database.
- Developed a REST API across eight modules (auth, hotels, rooms, bookings, payments, reviews, owner, admin) with five related data models: users, hotels, rooms, bookings and reviews.
- Implemented hotel image upload with Multer and Cloudinary, booking confirmation emails with Nodemailer, an admin hotel-approval workflow, and owner review replies and reporting.
- Built the React frontend with React Router, React Hook Form and Stripe Elements, including separate dashboards for customers, owners and admins.

Colombo Quick Bites — Food Ordering System

React.js, Node.js, Express.js, MongoDB, Socket.io, JWT, Tailwind CSS | github.com/kavinsansasi-dot/Colombo-Quick-Bites

Restaurant ordering system where customers place orders, staff process them with live status updates, and admins manage the menu and inventory.

- Built a MERN food ordering platform with role-based access for admin, staff and customers, using JWT authentication and bcrypt password hashing.
- Implemented real-time order tracking with Socket.io rooms so customers see status updates as staff process orders.
- Developed a REST API with seven modules (auth, users, menu, orders, inventory, promotions, feedback), with request validation and centralized error handling.
- Built admin and staff dashboards for menu management with image upload (Multer), inventory, promotions, feedback and user management.
- Built the React frontend with React Router, Context API (auth and cart), React Query and Tailwind CSS.

Northstar POS — Inventory and Billing System

Flutter, Dart, Node.js, Express.js, MongoDB, JWT, Riverpod | github.com/kavinsansasi-dot/Northstar-POS

Full-stack point-of-sale and inventory system for small retail shops, covering billing, stock tracking, customer records and sales analytics in one app that runs on web and Android tablets.

- Built a Flutter (web and tablet) frontend with a Node.js and Express REST API and a MongoDB database.
- Implemented JWT authentication with role-based access control (admin and cashier) on both API routes and app navigation.
- Designed the billing flow with cart, discount, tax, cash/card/UPI payments and automatic stock deduction, using atomic updates with rollback to prevent overselling.
- Developed an admin dashboard with daily sales, bill count, top products, low-stock alerts and a weekly sales chart.
- Generated branded A4 and 80mm thermal PDF invoices with the pdf and printing packages.
- Created a responsive light/dark UI with Riverpod state management and go_router navigation.

UI E-Learn — E-Learning Platform

React (Vite), Node.js, Express.js, MongoDB, JWT | github.com/kavinsansasi-dot/UI-E-Learn-E-Learning-Platform

E-learning platform where instructors manage courses and assessments, students enrol and submit work, and admins oversee the platform.

- Built a full-stack e-learning platform with student, instructor and admin roles, using JWT authentication and middleware-protected routes.
- Implemented course management, assessments, submissions, marks and a payment-submission flow, each with its own model and controller.
- Built a React frontend with separate views per role, covering course enrolment, assessment editing, marks entry and payment history.

MOBILE AND OTHER PROJECTS

ImiliPocket — Personal Finance Tracker

Kotlin, Android, Material Design, RecyclerView, SharedPreferences, Gson | github.com/kavinsansasi-dot/ImiliPocket

- Built a native Android app with onboarding, sign-in and sign-up, income and expense tracking by category, and monthly budgets, using RecyclerView and local persistence.

MGT — Booking Payment Module

React, Express.js, MongoDB | github.com/kavinsansasi-dot/MGT-Booking-Payment-Module-

- Built a payment module for a booking system, with create, view, edit and delete screens backed by a REST API.

EDUCATION

- **BSc (Hons) in Information Technology, specializing in Information Technology** — Sri Lanka Institute of Information Technology (SLIIT) — Oct 2022 – Present
- **Assured Diploma in Information Technology (DITEC)** — Esoft Metro Campus — May 2023 – May 2024
- **Board of Secondary Education** — J/Jaffna Hindu College, Jaffna — Jan 2013 – Feb 2022
